

Milwaukee Water Works

Safe, Abundant Drinking Water.

Dear

The purpose of this letter is to provide you with the results of the water samples you recently collected. The samples were analyzed for lead concentrations after repair work was performed on the lead service line that connects your residence (building) to the city water main in the street. All sample results are enclosed with this letter.

Twelve 1-liter samples were collected in a row after the water sat undisturbed in the pipes for six hours. These samples provide information on how lead concentrations in drinking water are affected by the internal plumbing in the building and the water service line that connects the building to the water main in the street. An additional 13th, well-flushed sample was also collected. This sample represents water coming from the water main in the street.

ADD APPROPRIATE PARAGRAPH (ONE OR A THROUGH E FROM “aaResults template letters middle options_160309” OPTIONS BASED ON Pb LEVEL AND DEMOGRAPHIC INFO, SENTENCE F IF APPROPRIATE AND ANY SPECIAL ADDITIONAL MESSAGES.

If you have questions about your results, please call me directly at (414) 286-2226. If you have questions or concerns about the health effects of lead in drinking water, please contact the City of Milwaukee Health Department of (414) 286-3521.

Sincerely,

Lon Couillard
Water Quality Manager
